2.	15 to 20 jet aircraft took off daily behind sandrits. An average of three planes was a were once counted in August 1949. Description of aircraft (see also sketch) Air intake in nose, air exhaust at tail, a leading and trailing edges, rounded wing the rudder assembly forming tail, swept back of in mid-rudder assembly, section of fuselage equally long as section aft of wings, span astream-line shaped fuselage (looking like)	ad a woods east of the aloft, but 26 planes swept back wings, lateral sips, strikingly large alevator assembly set be forward of wings about about 10 meters, stubby, "crammed carp"), cockpit of leading edge of wings. The planes being fractions the planes to gather anes made left turns and to then headed west, flying the other. The total km. About 30 minutes
	15 to 20 jet aircraft took off daily behind sandrits. An average of three planes was a were once counted in August 1949. Description of aircraft (see also sketch) Air intake in nose, air exhaust at tail, a leading and trailing edges, rounded wing the rudder assembly forming tail, as swept back of in mid-rudder assembly, section of fuselage equally long as section aft of wings, apart stream-line shaped fuselage (looking like in nose compartment as far as closely aft. The 36 aircraft took off by threes at interthe interval between the individual three of a minute. It took about 15 minutes for over the sandpits. While gathering, the place of the sandpits. While gathering, the place of the formation was estimated at 3	ad a woods east of the aloft, but 26 planes swept back wings, lateral sips, strikingly large alevator assembly set a forward of wings about a about 10 meters, stubby, "crammed carp"), cockpit of leading edge of wings. The planes being fractions the planes to gather and then headed west, flying the other. The total km. About 30 minutes out one minute.
3.	15 to 20 jet aircraft took off daily behind sandrits. An average of three planes was a were once counted in August 1949. Description of aircraft (see also sketch) Air intake in nose, air exhaust at tail, a leading and trailing edges, rounded wing trudder assembly forming tail, swept back a in mid-rudder assembly, section of fuselage qually long as section aft of wings, span stream-line shaped fuselage (looking like in nose compartment as far as closely aft. The 36 aircraft took off by threes at interthe interval between the individual three of a minute. It took about 15 minutes for over the sandpits. Unile gathering, the planed to about 2,000 meters. The aircraft in formations of three planes, one behind length of the formation was estimated at 3 later, the planes landed at intervals of about 15 minutes and a start of the airfield from which the jet planes too.	wept back wings, lateral sips, strikingly large slevator assembly set se forward of wings about about 10 meters, stubby, "crammed carp"), cockpit of leading edge of wings. Total of about one minute, planes being fractions the planes to gather anes made left turns and to then headed west, flying the other. The total km. About 30 minutes out one minute. The off was about 5 km away.
3.	15 to 20 jet aircraft took off daily behind sandrits. An average of three planes was a were once counted in August 1949. Description of aircraft (see also sketch) Air intake in nose, air exhaust at tail, a leading and trailing edges, rounded wing the rudder assembly forming tail, swept back of in mid-rudder assembly, section of fuselage equally long as section aft of wings, span stream-line shaped fuselage (looking like in nose compartment as far as closely aft) The 36 aircraft took off by threes at interthe interval between the individual three of a minute. It took about 15 minutes for over the sandpits. Unite gathering, the planed to about 2,000 meters. The aircraft in formations of three planes, one behind length of the formation was estimated at 3 later, the planes landed at intervals of ab. The airfield from which the jet planes took east of the sandpits and north of the high	wept back wings, lateral sips, strikingly large blevator assembly set about 10 meters, stubby, "crammod carp"), cockpit of leading edge of wings. vals of about one minute, planes being fractions the planes to gather and then headed west, flying the other. The total km. About 30 minutes out one minute. Document No. No Change in Plass Change in Pl
4.	15 to 20 jet aircraft took off daily behind sandrits. An average of three planes was a were once counted in August 1949. Description of aircraft (see also sketch) Air intake in nose, air exhaust at tail, a leading and trailing edges, rounded wing trudder assembly forming tail, swept back of in mid-rudder assembly, section of fuselage equally long as section aft of wings, span stream-line shaped fuselage (looking like in nose compartment as far as closely aft. The 36 aircraft took off by threes at interthe interval between the individual three of a minute. It took about 15 minutes for over the sandpits. While gathering, the planed to about 2,000 meters. The aircraft in formations of three planes, one behind length of the formation was estimated at 3 later, the planes landed at intervals of about 2 aircraft and north of the high cast of the sandpits and north of the high cast of the sandpits and north of the high	wept back wings, lateral sips, strikingly large blevator assembly set about 10 meters, stubby, "crammod carp"), cockpit of leading edge of wings. vals of about one minute, planes being fractions the planes to gather and then headed west, flying the other. The total km. About 30 minutes out one minute. Document No. No Change in Plass Change in Pl
3.	15 to 20 jet aircraft took off daily behind sandrits. An average of three planes was a were once counted in August 1949. Description of aircraft (see also sketch) Air intake in nose, air exhaust at tail, a leading and trailing edges, rounded wing the rudder assembly forming tail, aswept back of in mid-rudder assembly, section of fuselage equally long as section aft of wings, span stream-line shaped fuselage (looking like in nose compartment as far as closely aft. The 36 aircraft took off by threes at interthe interval between the individual three of a minute. It took about 15 minutes for over the sandpits. Uhile gathering, the planebed to about 2,000 meters. The aircraft in formations of three planes, one behind length of the formation was estimated at 3 later, the planes landed at intervals of above the sandpits and north of the high cast of the sandpits and north of the high	swept back wings, lateral sips, strikingly large slevator assembly set se forward of wings about about 10 meters, stubby, "crammed carp"), cockpit of leading edge of wings. The planes to gather and then headed west, flying the other. The total km. About 30 minutes out one minute. The off was about 5 km away. Decament No. No Change in class Chase Change in class Decament No. No Change in class Decament No.

La Control Con	

a. The reported airfield is robably the Tuchkovo irfield which, according to previous reports, is occupied by swept back jet fighters. The description of the jet fighter type agrees in many features with the observations by other sources, particularly as to the sweep back of the wings and the cockpit set much to the fore.

b. It is assumed that a fighter regiment of the Air Defense, equipped with a swept back jet fighter type, was stationed at the field in the summer of 1949.

1 Annex : Jet Fighter Type Observed East of Mozhaisk.
